HDMI AUDIO RETURN CHANNEL ADAPTER/ EXTRACTOR

An HDMI audio extractor works by converting the incoming HDMI signal into separate video and audio signals. The output video signal will still be a digital HDMI signal, while the audio will be turned into a 2-channel stereo audio signal and a digital audio signal depending on whether the audio ex-tractor has this capability.

HDMI audio extractors also have the ability to extract 5.1/7.1 Dolby digital surround sound, which is sent through the optical jack. You can usually select which audio signal you would like to use via a mode switch.

Z0204

HDMI AUDIO RETURN CHANNEL AND DAC AUDIO CONVERTER

Z0205

HDMI ARC Audio adapter and DAC converter can transmit audio from the TV to the Optical coacial 3,5mm audio via HDMI (ARC) interface and output simultaneously. This solves the problems of having no audio output interface that the TV cannot be connected to the sound system.
